

DOUBLE R
BUILDING PRODUCTS LTD.

For immediate release.

April 20, 2011

BluWood Canada has quickly become a very reputable and recognizable product through its many appearances on various home improvement shows both nationally and internationally.

We at **Double R Building Products Ltd.** are constantly searching for better products and services for our customers to assist them in building the best homes possible. **Double R Building Products** is proud to announce that they are the only Western Canadian Contractor based lumber yard to be carrying and distributing lumber and sheathing products treated with **BluWood**.

BluWood protects both the consumer as well as the builder by eliminating the potential of mould, fungus and wood ingesting insects, such as termites. Along with being recognized as being "green friendly" by the LEED green building rating system, it is listed in the GreenSpec Directory.

The opportunity to offer a product to Home Builders as well as Home Owners that will protect the investment of their home for its lifetime against mould, fungus and wood ingesting insects is something that the entire staff of **Double R Building Products** is very proud of.
